PROFILE

Mobile and full-stack developer specializing in Flutter, Dart, backend development, and REST APIs, with a Master's degree in Networks and Distributed Systems. Experienced in developing production mobile applications, backend services, and third-party integrations. Strong knowledge of computer networks, distributed systems, 5G network slicing, Linux, and network simulation, with practical experience applying machine learning and optimization techniques to networking problems.

EDUCATION

Master's Degree, Networks and Distributed Systems

Sep 2024 — Jul 2026

Licence, Mathematics and Computer Science

Sep 2021 — Jun 2024

TECHNICAL SKILLS

- **Mobile:** Flutter, Dart, Android, iOS, Firebase
- **Web:** Typescript, ReactJS
- **Backend:** Node.js, Express.js, NestJS, REST APIs, MySQL, PostgreSQL
- **Tools:** Git, GitHub, Postman, Linux, VS Code
- **Others:** Python, Go, Shell

PROJECTS

Flutter · Node.js · Express · Firebase · Stripe, La Famille Eat — Restaurant Ordering App 2024 — 2025

- Production restaurant ordering application published on Google Play and App Store.
- Implemented menu browsing, cart management, ordering, delivery/takeaway, customer addresses, notifications, and payments.

Flutter · PHP · REST API, LSA Dor — Algerian Sign Language Learning App 2025 — 2025

- Mobile learning application featuring video lessons, a sign dictionary, and interactive quizzes.
- Built the Flutter frontend and backend API; published on Google Play with 500+ downloads and a 4.0 rating.

Flutter · PHP · REST API, Safsaftam — Grocery Ordering App 2023 — 2023

- Full-stack grocery ordering application developed for a private client.
- Implemented product browsing, cart management, ordering, and backend API integration.

Flutter · Node.js · NestJS · REST API, The Keys — Hotel & Car Reservation App 2025 — Present

- Unreleased hotel and car reservation application currently under development.
- Building booking workflows with a Flutter client and Node.js backend.

Python · C++ · XGBoost · GWO · WOA · Flask · OMNeT++ · INET, 5G Network Slicing — ML Prediction & Optimization 2025 — 2026

- Master's project applying machine learning and metaheuristic optimization to classify eMBB, URLLC, and mMTC network slices.
- Integrated the prediction pipeline with OMNeT++/INET simulation.
